

## **Celsa Armeringsstål AS Environmental Policy statement**

### **Background**

Celsa Armeringsstål is the main supplier of reinforcement steel to the Nordic countries. Celsa Armeringsstål production is 100% based on recycled steel scrap which is melted in an Electric Arc Furnace (EAF). Celsa Armeringsstål recognizes its business's potential environmental impact and the part it has to play in maintaining a clean and healthy environment.

### **Policy**

Celsa Armeringsstål is committed to continual improvements in its activities so that any adverse impacts on the environment are either minimized or eliminated.

We will therefore ensure:

- To work with environmental management system, duly certified and adapted to the nature of our activity
- To have all applicable environmental legal and regulatory requirement identified, monitored and compiled
- To identify the environmental aspects of all processes and to place appropriate controls to prevent pollution, with regular monitoring of emissions
- To keep the consumption of energy, use of natural resources and generation of waste on a minimum, as far as it is possible
- To promote environmental friendly policies amongst suppliers and contractors including as a criteria for their selection their commitment and evolution in this matter, and to communicate to all stakeholders the relevant information
- To ensure that environmental aspects are well known among all employees and that each person in our organization acts in an environmental friendly manner

Celsa Armeringsstål has recently invested in the Best Available Technologies (BAT) for major parts of the process. A natural area of concentration for Celsa Armeringsstål the next years will be to work toward optimal running of these installations, so that the emissions of heavy metals, mercury, dioxins and dust can be at its minimum.

Through the committed support and participation of all those involved in its operations, Celsa Armeringsstål will fulfil this commitment achieve its objectives and help safeguard the environment for future generations.
